Expert Report

Surface Disinfection with **Chlorine Disinfection** under Clean Conditions (DGHM Catalogue of Requirements 2002, Chapter 10.1)

The surface disinfectant **Chlorine Disinfection** was tested according to the "DGHM standard methods for testing chemical disinfection procedures" (as of 1 September 2001) and evaluated according to the "List of requirements for inclusion of chemical disinfection procedures in the DGHM list of disinfectants" (as of 4 February 2002).

According to test report no L12/044 from Dr. Brill + Partner GmbH dated 16 July 2012, the active ingredient solution showed sufficient activity in surface disinfection under clean conditions.

The recommendation for listing **Chlorine Disinfection** at the VAH is:

Area of activity	Organic load	Concentration	Exposure time
Bactericidal and yeasticidal activity:	clean conditions	100 %	5 minutes
